BSE Institute Limited (BIL)

BSE Institute Limited is a wholly owned subsidiary of the BSE. BSE Institute Limited inherits from BSE the knowledge and insights into the capital markets industry, garnered over the past 140 years.

- At BSE Institute Limited we believe that insightful financial professionals will drive innovation, growth, and value in today's dynamic world economy. Hence, our open registration programs are designed to transform good professionals into great leaders.
- With a diverse mix of participants, experiential and holistic learning, faculty with vast industry experience, and strong corporate involvement, learning at BSE Institute Limited is a unique experience.
- We credit ourselves for having trained over 10,000 participants in various courses offered at the institute.
- The courses designed at the BSE Institute Limited help in developing the required capabilities and understanding the trends and in preparing for what's around the bend.

Brief background of the project

In today's professional environment, employers seek graduates who are job-ready from day one. They expect new recruits to be able to adapt faster to demands of working in one of the world's most challenging and fascinating industries. This includes skills such as understanding client objectives, preparing financial models, and much more.

What the project will cover

BSEIMP has been modeled to put academic and practical skills in a symbiotic relationship for MBA students and emerging finance professionals. The Project is a unique and innovative experience and the only one of its kind currently in India. It focuses on overall development of knowledge and its suitable implementation in work based scenarios. Another novel aspect of this project resides in the fact that various core modules are taught and lectured on by experienced faculty who have specialized and undertaken extensive work in those areas.

Project design

The Project has scenario-based learning which uses actual case examples to develop student's finance practice skills. Instead of long lectures and volumes of material to read, we present real case studies that finance professionals face on a daily basis. The Project provides the student with the tools to address these financial matters, helping become job-ready.

Project benefits

For students:----------

- Increased confidence in handling core finance areas
- Authoritative project completion certificate to differentiate job candidacy
- Potential to earn internship with financial organizations
- Higher entry salary for freshers

For colleges:----------

- Enhance employability skills of the students
- Increase the number of placements
- Potential to get into the top notch companies

For financial organizations:--------

- Completion certificate acts as a CV screening tool to identify attractive candidates
- Reduced training time and costs for the organization
- Greater productivity from day one

Project faculty

The faculty members are distinguished finance professionals and senior specialists in Indian financial markets. These experts have worked for renowned global and Indian finance firms, and have many years of experience.

Project methodology & duration

The project is completely online that is it has live webinars- online live audio visual lectures. The course will consist of lecture videos totalling 25 hours - approximately 120 minutes once a week for 10 weeks. Lecture notes and webinars files from each course session will be available. There will also be weekly problem sets due, and an assessment at the end of week 6. Students have to submit two assignments and a project report as the output for the course.

The project duration is approximately three months.

Over view of project areas:

01 Financial Modeling

Over the period, you have learnt various theoretical topics such as financial statements, accountancy, economics, budgeting and financial management. In financial modeling, you will learn practical applications of these theories and be able to make business plans or financial models of a company.
The project on Financial Modeling enables you to build a step-by-step snapshot of an organizations financial health. Financial Modeling is a tool that will help you to take business decisions by comparing different scenarios on excel.
The course would entail taking up an important sector like Pharma and do a detailed sector analysis. It would involve learning and understanding of financial concepts like financial analysis, fundamental analysis, introduction to financial modeling, financial forecasting using various techniques, various valuation techniques like Dividend Discount model, Gordon Growth model, Discounted cash flow techniques, relative valuation methods etc.
It will use an example of a large listed company as a case study so that students can appreciate the application of the aforementioned concepts in a real life scenario. Towards the end, once the students discern the use of the above concepts, they will undertake a project wherein they will themselves evaluate a company under the expert guidance of industry practitioners.

02 Corporate Finance

The Corporate Finance course will provide a market-oriented framework for analyzing the major types of financial decisions made by corporations. Our corporate finance programmes is designed to address your individual learning needs, fill knowledge gaps and deliver a practical approach to finance training for any career stage or specialisation. The students would be taken through live example and they would be taught to browse through the annual report and analyse the same.
Lectures and readings will provide an introduction to present value techniques, ratios, benchmarking the comparable companies and In Depth Industry Analysis.

03 Equity Research

The proposed project on equity research would introduce the students to the various techniques of research methodology and valuations currently in practice in the industry.

The course would entail taking up an important sector like IT and do a detailed sector analysis. It would involve learning and understanding of financial concepts like financial analysis, fundamental analysis, introduction to financial modeling, financial forecasting using various techniques, various valuation techniques like Dividend Discount model, Gordon Growth model, Discounted cash flow techniques, relative valuation methods etc.

It will use an example of a large listed company as a case study so that students can appreciate the application of the aforementioned concepts in a real life scenario. Towards the end, once the students discern the use of the above concepts, they will undertake a project wherein they will themselves evaluate a company under the expert guidance of industry practitioners.

04 Derivatives

The derivatives project is a comprehensive program on derivatives designed especially for beginners.

The program covers a wide range of topics encompassing the derivatives markets. The content includes introduction to Forwards and Futures, Pricing of Forwards and Futures, Basics of Index and its application, Arbitrage, Hedging and Speculation etc.

The course also covers Option basics, Option Volatility, Option pricing, Option Synthetics, Option Greeks and some commonly used Option Strategies. Basics of Interest Rate Swaps and Currency Swaps are also covered.

The webinar is conducted by experienced and reputed faculty with rich industry experience. The session is highly interactive and encourages the participants to have an open discussion with the faculty for better understanding of the subject.
